DS/EN 16165:2021

København

DS projekt: M340586

ICS: 17.040.20; 91.060.30; 93.080.10

Første del af denne publikations betegnelse er:

DS/EN, hvilket betyder, at det er en europæisk standard, der har status som dansk standard.

Denne publikations overensstemmelse er:

IDT med: EN 16165:2021

DS-publikationen er på engelsk.

Denne publikation erstatter: [DS/CEN/TS 16165:2016](#)

DS-publikationstyper

Dansk Standard udgiver forskellige publikationstyper.

Typen på denne publikation fremgår af forsiden.

Der kan være tale om:

Dansk standard

- standard, der er udarbejdet på nationalt niveau, eller som er baseret på et andet lands nationale standard, eller
- standard, der er udarbejdet på internationalt og/eller europæisk niveau, og som har fået status som dansk standard

DS-information

- publikation, der er udarbejdet på nationalt niveau, og som ikke har opnået status som standard, eller
- publikation, der er udarbejdet på internationalt og/eller europæisk niveau, og som ikke har fået status som standard, fx en teknisk rapport, eller
- europæisk præstandard

DS-håndbog

- samling af standarder, eventuelt suppleret med informativt materiale

DS-hæfte

- publikation med informativt materiale

Til disse publikationstyper kan endvidere udgives

- tillæg og rettelsesblade

DS-publikationsform

Publikationstyperne udgives i forskellig form som henholdsvis

- fuldtekstpublikation (publikationen er trykt i sin helhed)
- godkendelsesblad (publikationen leveres i kopi med et trykt DS-omslag)
- elektronisk (publikationen leveres på et elektronisk medie)

DS-betegnelse

Alle DS-publikationers betegnelse begynder med DS efterfulgt af et eller flere præfikser og et nr., fx **DS 383**, **DS/EN 5414** osv. Hvis der efter nr. er angivet et **A** eller **Cor**, betyder det, enten at det er et **tillæg** eller et **rettelsesblad** til hovedstandard, eller at det er indført i hovedstandard.

DS-betegnelse angives på forsiden.

Overensstemmelse med anden publikation:

Overensstemmelse kan enten være IDT, EQV, NEQ eller MOD

- **IDT:** Når publikationen er identisk med en given publikation.
- **EQV:** Når publikationen teknisk er i overensstemmelse med en given publikation, men præsentationen er ændret.
- **NEQ:** Når publikationen teknisk eller præsentationsmæssigt ikke er i overensstemmelse med en given standard, men udarbejdet på baggrund af denne.
- **MOD:** Når publikationen er modificeret i forhold til en given publikation.

NORME EUROPÉENNE

EUROPÄISCHE NORM

October 2021

ICS 17.040.20; 91.060.30; 93.080.10

Supersedes CEN/TS 16165:2016

English Version

Determination of slip resistance of pedestrian surfaces - Methods of evaluation

Détermination de la résistance à la glissance de
surfaces piétonnières - Méthodes d'évaluation

Bestimmung der Rutschhemmung von
Fußböden — Ermittlungsverfahren

This European Standard was approved by CEN on 25 July 2021.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

European foreword

This document ([EN 16165:2021](#)) has been prepared by Technical Committee CEN/TC 339 “Slip resistance of pedestrian surfaces - Methods of evaluation”, the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by April 2022, and conflicting national standards shall be withdrawn at the latest by April 2022.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document supersedes [CEN/TS 16165:2016](#).

The main changes compared to the previous edition are as follows:

- a) description of test surface used in the barefoot ramp test and the shod ramp test changed;
- b) calibration procedure of the test device used in the barefoot ramp test changed;
- c) angles of slip for the three standard surfaces used in the barefoot ramp test changed;
- d) procedure for verification and correction in the barefoot ramp test changed;
- e) description of the test procedure used in the barefoot ramp test changed;
- f) description of test footwear used in the shod ramp test changed;
- g) angles of slip for the three standard surfaces used in the shod ramp test changed;
- h) information when slider pads and slider assemblies shall be re-prepared or discarded added to the pendulum test;
- i) description of the verification procedure used in the pendulum test and the tribometer test changed;
- j) Reference surfaces for pendulum test and tribometer tests were removed;
- k) procedure for the preparation of sliders used in the tribometer test changed.

Any feedback and questions on this document should be directed to the users’ national standards body. A complete listing of these bodies can be found on the CEN website.

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Introduction

This document describes four test methods commonly used in Europe for the determination of the slip resistance of floorings.

The method in [Annex A](#) describes the test method based on the ramp using water as the test liquid and with the operator barefoot. This method cannot be used *in situ*. It is referred to as the “Barefoot ramp method”.

The method in [Annex B](#) describes the test method based on the ramp using oil as the test liquid and with the operator wearing specified shoes. This method cannot be used *in situ*. It is referred to as the “Shod ramp test”.

NOTE Oil is used as the test liquid to make the test more sensitive.

The method in [Annex C](#) describes the test method based on the pendulum in dry and wet conditions using specified rubber sliders. This method can be used *in situ*. It is referred to as the “Pendulum test”.

The method in [Annex D](#) describes the test method based on the tribometer in dry and wet conditions using specified rubber sliders. This method can be used *in situ*. It is referred to as the “Tribometer test”.

The purpose of this document is to harmonize the procedures used when using any of the above test methods. It is not intended to promote any particular test method to Product Group Technical Committees or to limit their choice.

The test methods given in this document cannot be compared with each other. The results can only be compared with results that are obtained with the same test method.

Determination of slip resistance of pedestrian surfaces – Methods of evaluation

1 Scope

This document specifies test methods for determining the slip resistance of surfaces used by pedestrians.

NOTE — It is also possible to use this document for measurements where persons might walk on trafficked areas.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
